

PSY 200 — Exam 1 Study Guide

Exam 1 covers Chapters 1-4. Be able to define, give an example of and apply each concept.

1. Compare the behavioral, cognitive, biological and sociocultural perspectives.
2. Explain why correlation does not imply causation and give an example of a third variable.
3. Identify the independent and dependent variables in a described experiment.
4. Describe the parts of a neuron and how an action potential travels.
5. Name the four lobes of the cerebral cortex and one function of each.
6. Distinguish sensation from perception; explain top-down versus bottom-up processing.
